Dark of Daras No. 4000

U.S. Patent and Trademark Office

Art Unit: 2874

#### DETAILED ACTION

1. Applicant's communication filed on September 16, 2003 has been carefully considered and placed of record in the file. Claims 1 and 12 have been amended. Claims 13-19 have been added. Claims 1-19 are pending.

# Election/Restrictions

2. Newly submitted claims 13-19 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Inventions I (claims 13-19) and II (claims 1-12) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a materially different process such as one wherein the caps can be formed by etching.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification (Group I in class 264/239 and Group II in class 385/88), restriction for examination purposes as indicated is proper.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 13-19 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 4. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Han et al. (previously relied upon). ). Han et al. discloses an optical fiber terminator package including:
  - a. A semiconductor chip 16 having a top surface and a bottom surface and including at least one first and second optical device 14 which emits or receives electromagnetic radiation at one or more wavelengths from the top surface;
  - b. A first hollow cap (15, 20 and 22) having a central portion (recess shown in Figure 2a) and four perimeter walls extending from a perimeter edge of the central portion with a free edge of each perimeter wall bonded to the top surface to provide a first cavity which, in plan view, overlays at least part or all of at least one light emitting device, said central portion including:
    - i. At least one region (the central opening shown in Figure 2a or optical element 20) which is at least substantially transparent or translucent to electromagnetic radiation at said one or more wavelengths; and

The cap further includes first and second attachment means 24, 26 (one on each side of the central portion. Han et al. also discloses a second cap 18 bonded to the bottom surface of the chip 16, said second cap, in plan view, overlaying at least part or all of at least one first optical

Application/Control Number: 10/040,405 Page 4

Art Unit: 2874

device. Regarding claim 11 and 12, see Figure 4a, which shows first and second regions that refract electromagnetic radiation passing therethrough. Note also claims 1-7, 9 and 10 of Han et al. It is additionally noted that the method limitation of "wherein the first cap has been bonded to the semiconductor chip at the wafer stage prior to separation of the wafer into individual packages" is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

## Response to Arguments

Applicant's arguments filed September 16, 2003 have been fully considered but they are not persuasive. Applicant states that Han et al. does not disclose or suggest bonding of the cap to the semiconductor chip at the wafer stage. As stated in the rejection above, the method of making the device is not germane to the issue of patentability of the device itself. In particular, the method limitation of "wherein the first cap has been bonded to the semiconductor chip at the wafer stage prior to separation of the wafer into individual packages" does not structurally distinguish the claimed invention from the device of Han et al. Therefore, Han et al. anticipates the device as set forth in the claims.

### Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Steinberg et al. (U.S. Patent Application Publication) discloses optical package assembly at a wafer level as being within the level of ordinary skill in the art. See paragraph [0033].
- 7. Any inquiry concerning the merits of this communication should be directed to Examiner Sarah Song at telephone number 703-306-5799. Any inquiry of a general or clerical nature, or
